

Why choose Dermo Ablation Surgery?

PHYSICIAN BENEFITS:

- Versatile
- Easy to use
- Non-invasive
- Fast
- High return on investment

PATIENT BENEFITS:

- Excellent aesthetic results
- Little downtime
- Well tolerated
- No pain
- Low treatment cost

DERMO ABLATION SURGERY
The New Plasma Energy

D.A.S. medical™

Derma Ablation Surgery

Derma Ablation Surgery or **D.A.S. medical** is an innovative device designed and manufactured in Italy. It uses long-wave radiofrequency in order to generate the plasma effect. D.A.S. *medical* allows for a **comfortable** and **safe** treatment of the skin to clear age spots, warts and nevus, and treat localized skin laxity and many other skin problems.

The modulation of frequency and power (there are 26 possible settings) allows for tissue contraction and super-selective cutting. It also features five LED lights that have been studied to highlight different skin lesions.

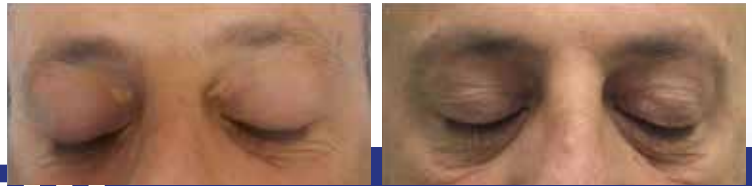

D.A.S. *medical* is a handy and portable device, and it is of great advantage in **dermatology**, **aesthetic medicine** and **aesthetic surgery**.

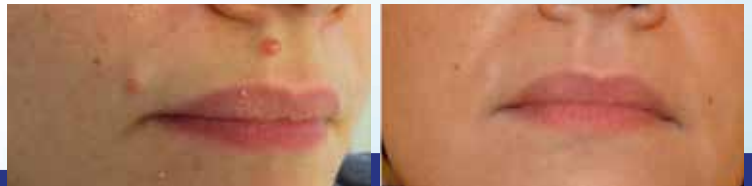

Treatments

- Non-surgical blepharoplasty
- Elettropeel
- Lentigo simplex
- Seborrheic keratosis
- Epidermal nevus
- Epidermal lesions
- Viral warts
- Fibroma pendulans
- Fibrous papule
- Sebaceous hyperplasia
- Xanthelasma
- Cherry hemangioma
- Condylomata acuminata
- Scars
- Stretch marks
- Skin irregularities
- Wrinkles
